TRANSITION FROM ADVANCED LEVEL TO UNIVERSITY

@unitetnz

WWW.UNITESCHOLARSPROGRAM.ORG

INTRODUCTION

Purpose of the module: To equip Form 6 graduates with the knowledge and skills needed to navigate the transition to university life successfully.

Scope: Covering academic, social, emotional, and other aspects of university life.

Meaning of transition from A' level to university:

Moving from the structured learning environment of high school to the more independent and specialized environment of higher education. In advanced level education, students typically follow a given curriculum with a set schedule and clear guidance from teachers. In university, students have more freedom to choose their courses and self-manage their time. University education emphasizes **critical thinking, research, and self-directed learning**, preparing students for their chosen careers or further academic pursuits. This transition requires students to adapt to a new level of academic consistency, take responsibility for their own learning, and develop strong study habits and time management skills.

EFFECTIVE TIME MANAGEMENT

Life at university means more freedom and less structured class schedules. This increased freedom requires effective time management skills to successfully balance academics, social activities, and personal responsibilities. Things to consider:

- **Create a personal timetable:** A written personal timetable can help track commitments, including classes, study sessions, extracurricular activities, and personal time for resting. (You cannot work *all* the time.)
- **Prioritize tasks:** It's essential to understand which tasks are most important and then tackle those first. Prioritize assignments with the nearest deadlines or those that are most difficult and take the most time.
- **Be flexible:** While having a timetable is crucial, it's also important to be flexible. University life is dynamic; sometimes class timetables change. For example, a class may happen to have sessions on a weekend or during the exams of other classes. Learning how to adapt without getting stressed will be a key skill for success in university.

SCENARIO 1

Mwakatimile is an A-level graduate who, as a result of his excellent academic performance, was able to join university. During his first semester in university, Mwakatimile struggled with his newfound freedom and lack of rigid schedule, which meant he often delayed and missed key deadlines for assignments. Mwakatimile often found himself overwhelmed with last-minute tasks, which increased his stress levels and negatively affected his academic performance. Mwakatimile told his friend, a fourth-year university student, about his challenges. This friend showed Mwakatimile his daily timetable and advised Mwakatimile to make his own. Mwakatimile then created his own detailed weekly timetable and allocated specific times to attend lectures, study, and complete assignments. He also scheduled breaks and leisure activities to ensure he had a balanced daily routine. By prioritizing his tasks and adhering to his timetable, Mwakatimile noticed improvement in his productivity and overall well-being while at school.

Why did Mwakatimile struggle with time management initially?

How did creating a timetable help Mwakatimile improve his life at university?

What measures can you suggest for university students who face similar challenges?

SCENARIO 2

Kim is a third-year university student majoring in computer engineering. During his first semester, Kim received his class timetable, which was packed with core classes, advanced seminars and practical labs. Despite of the tight timetable, Kim had other activities to manage as well. He was participating in the university robotics club where he volunteered mentoring younger students, and he also had a small business selling groundnuts. Kim had a difficult time balancing it all and sometimes went to sleep too late as he had to prepare his business products for sale while also finishing lesson plans for his club sessions. Kim started missing classes due to tiredness and as a result failed some subjects. After reviewing his results, Kim asked for advice from colleagues who performed very well. They told him to set a clear schedule that indicated each activity with its respective time to be conducted. Kim then set a new rigid timetable, adhered to it, and performed well his second semester. His business also expanded, and he found that he had more time for mentoring students in the robotics club.

What measures did Kim use to stay focused on his studies?

What other advice you could provide to Kim so he can perform well in all of his activities?

THE LIFE OF A UNIVERSITY STUDENT

Balancing various aspects of university life requires establishing a daily routine that encompasses academic responsibilities, personal activities, and social interactions.

- **Balance study time and free time:** Allocate specific times for studying, attending classes, and engaging in leisure activities. This balance prevents burnout and keeps you motivated.
- **Develop a routine:** A consistent daily routine helps maintain a balanced lifestyle. This routine should include time for meals, exercise, adequate sleep, and academic commitments.

SCENARIO

Koku joined university majoring in health science. During her first semester, she found it difficult to balance her study time with her social activities. Koku often stayed up late socializing, which affected her morning classes as she felt sleepy. Koku decided to create a daily schedule. She set specific times for waking up, attending classes, studying, exercising, and socializing. By following this routine, Koku found that she had enough time for both her academic responsibilities and her personal activities. This balanced approach helped her improve her grades and maintain a healthy lifestyle.

What challenges did Koku face in balancing her daily schedule?

How did creating a routine helped Koku? Do you have a routine? If so, what?

What would be an example of an effective daily schedule to follow while in university?

INTERACTING WITH FELLOW STUDENTS

Building healthy and supportive relationships with fellow students is crucial for a positive university experience. These relationships can provide emotional support and enhance learning. To build healthy relationships:

- **Choose positive company:** Surround yourself with friends who encourage and support your academic and personal growth, not those who negatively influence you with such bad behavior as drinking alcohol and skipping classes. When you find yourself among the wrong kind of friends, move away from them. Bad company can lead you to make poor decisions.
- **Mingle and network:** Engage in group discussions, join study groups, and participate in social activities like sports and arts to expand your network and support system.
- **Be respectful and maintain boundaries:** Respect others' opinions and maintain healthy boundaries to ensure a positive and respectful environment for better life at university.

SCENARIO 1

Eshi joined university from an A-Level background and found herself isolating from other people due to shyness. She was afraid to approach new people and often felt lonely and disconnected from the university community. One day during a class session the psychology lecturer taught the students about the importance of building positive relationships with other people in the community. Following the lesson, Eshi recognized that she needed social connections, so she pushed herself to participate in group activities and join clubs related to her interests, like netball. Eshi attended group discussions where she met like-minded people. Over time, she built strong friendships and a supportive network, which greatly enhanced her university experience. These connections not only provided emotional support for Eshi, they also helped her improve academically through group studies and shared resources.

What challenges did Eshi face in interacting with fellow students?

Why is participating in group activities important?

What qualities are important when choosing friends in a university?

SCENARIO 2

Emmy, a first-year student studying biomedical science, was excited to start her new journey in university. When she arrived at university, she knew no one and struggled to make friends. Life was very tough as she was always left alone, and she was ignored when she tried to make friendships with other students. One day Emmy was approached by a certain group of students who seem friendly and eager to be with her. They invited her for a drink after class hours. Emmy accepted the invitation as she really wanted new friends. As they spent more time together Emmy noticed that her new friends engaged in bad behaviors such as skipping classes, taking alcohol, late night partying, and taking drugs. Emmy did not want to lose the only friends she had, so she also started engaging in the bad behaviors. As a result, Emmy failed her end of semester exams and was disqualified to continue with her studies.

How has Emmy's association with friends affected her academic performance?

Imagine you were Emmy. What could you do to avoid making bad decisions?

Why it is important to choose positive company?

INTERACTING WITH PROFESSORS

Building positive relationships with professors can significantly enhance your university experience. Professors can provide academic guidance, mentorship, and valuable networking opportunities. Things to consider:

- **Be respectful and punctual:** Attend classes on time and show respect towards your professors. This creates a positive impression and fosters a conducive learning environment.
- **Participate actively and consistently:** Engage actively in class by asking questions, contributing to discussions, and showing interest in all subject matter.
- **Seek guidance:** Approach professors for academic help and advice. Utilize their office hours to discuss course work, seek feedback, and gain insights into your academic progress.

SCENARIO

Marick was used to the structured environment of A-levels where he had regular interactions with his teachers. However, in university he found it challenging to navigate the less structured and more independent environment. He felt disconnected from his professors and unsure about how to seek their guidance. Marick was determined to improve his situation. He started participating more actively in class. He asked questions and sought clarification on topics he found difficult. He also requested feedback on his assignments to help him understand his strengths and where he needed improvement. Marick's professors liked how cooperative, focused, and hard working he was. Through these efforts, Marick built a positive relationship with his professors, which not only helped him gain valuable academic understandings but also perform better in his courses.

Why is it important to build a good relationship with professors?

How can active participation in class benefit a student?

What steps can students take to seek guidance effectively?

SELF-ADVOCACY & INDEPENDENCE

University life requires a greater degree of independence and self-advocacy. Students must learn to manage their own academic and personal responsibilities and seek help when needed. Successful university students will:

- **Speak up:** Confidently express your needs and concerns to professors, advisors, and fellow students.
- **Seek clarification:** Don't hesitate to ask questions when you do not understand something. Repeat the question or task and ask questions to clarify any doubts to ensure you are on the right track.
- **Make informed decisions:** Evaluate the consequences of your actions and make informed choices regarding your studies, extracurricular activities, and personal life.
- **Know your rights and responsibilities:** Be courageous. Speak up. Avoid getting involved in any kind of illegal matters.

SCENARIO

Sabby, a first- year university student, found it difficult to advocate for herself within a large university environment. She often felt overwhelmed and too shy to seek help or express her needs. A few weeks into university, Sabby thought about how she could change her attitudes. She began to actively seek out explanations in her classes and approached professors during office hours. She also joined student support groups where she learned strategies to improve her academic performance. Through speaking up and asking for help when needed, Sabby slowly built her confidence and improved her academic and personal experiences. She learned to make informed decisions about her coursework and extracurricular activities, which helped her achieve a balanced university life.

Why is self-advocacy important for a university student?

How did Sabby benefit from learning to speak up?

What strategies can help students become more independent?

EMOTIONAL RESILIENCE

University life can be emotionally challenging. Developing resilience and learning to manage emotions effectively are keys to maintaining well-being and achieving success. Things to consider:

- **Be flexible:** Learn to adapt quickly to change and work to stay highly organized to manage stress effectively.
- **Seek support:** Do not hesitate to ask for help from friends, family, or university counseling services when needed. Prioritize self care and managing stress, especially when faced with disappointments.
- **Build resilience:** Develop the ability to view challenges as opportunities for growth.
- **Focus on the positive:** When you feel stressed, think positive. Be vigilant with your thoughts. Too much negativity can lead to such dangers as self-harm or causing harm to other people.

SCENARIO

Before joining University, Shiyo was told that his studies would be simple and that he would have lots of free time to do anything he wanted. However, after joining university, Shiyo found it all to be very intense, and he felt unsettled and overwhelmed by the academic assignments. Shiyo's initial strategy was to isolate himself, which only increased his stress and feelings of loneliness. One day his friend visited Shiyo at the hostel. He found Shiyo sleeping during and asked him what was going on. Shiyo expressed what he felt, and his friend advised him to seek help from the university counseling department. The second day Shiyo attend the counseling sessions offered by the university, he joined a student support group where he met other students who were facing similar challenges. By sharing his feelings and experiences, Shiyo learned to develop resilience and over time his emotional well-being improved. Shiyo learned to manage his time better, seek help when needed, and view challenges as opportunities for growth.

What emotional challenges did Shiyo face?

How did seeking support help Shiyo academically?

What other strategies can students use to build their emotional well being?

SOCIAL SUCCESS STRATEGIES

Social success involves developing interpersonal skills, creating healthy relationships, and engaging in community activities. Volunteering is an effective avenue through which to gain confidence, improve skills, and forge valuable connections. Maintain your ethics, be open-minded, and work well to be successful socially. More ideas to consider:

- **Join clubs and activities:** Participating in extracurricular activities allows you to explore new interests and build new connections.
- **Maintain relationships:** Work to stay connected with family and old friends while making new friends at university.
- **Volunteer:** Volunteering can help build confidence, skills, and community connections.
- **Teamwork:** Focus on team goals and contribute to the team effectively. Teamwork helps you think of others before yourself.

SCENARIO

Baja was a shy boy when he first joined university. He found it difficult to make friends and often felt left out. One day, Baja decided to join a volunteering club that helped clean up the hospital that was located at the university. Through this activity, Baja began to meet new people who shared his interest in keeping the environment clean. His confidence grew as he participated in more projects, and he developed strong friendships with his fellow volunteers. Baja then also joined the health club and the student council, where he honed his public speaking and leadership skills. Over time, Baja's positive attitude and willingness to help others made him a well-respected and beloved figure in the university community.

What motivated Baja to start volunteering?

How did Baja's involvement in the health club and student council impact his social success?

What can other students learn from Baja approach to building social connections?

LIVING ARRANGEMENTS

Understanding the expectations and realities of living arrangements and daily life in university life is crucial for new and transitioning students. Things to consider:

- **Accept the self-governing nature of college life:** No one will watch or guide you. Establish a daily schedule that includes going to class, studying, socializing, and engaging in self-care. Be an active self leader and self manager.
- **Anticipate trouble with accommodations.** If the university has too few hostels (which is common), you may have to rent a room, which can be expensive. Prepare ahead of time and budget accordingly as best you can.
- **Embrace differences.** Anticipate that you will live with people who have different attitudes, behaviors, perceptions, and beliefs when you live in a university hostel. Being open to and comfortable with people's differences will serve you well.

SCENARIO

Sainga was excited to start his university studies far from home. He had high expectations for his new living conditions, imagining a comfortable hostel with modern facilities. However, upon arrival, Sainga found that the hostel was overcrowded and lacked even the most basic facilities. Sainga felt overwhelmed; therefore, he rented a room that was expensive and far from classes. Every day he had to take local transport daily back and forth. It was expensive and time consuming. At first it was very hard for Sainga as he arrived late to class, missed quizzes, and sometimes missed class altogether when he had no funds for transport. To help himself adapt, Sainga started organizing his daily tasks. He created a study schedule and worked to make small improvements to his living room to make it more comfortable. His resilience and adaptability helped him turn a challenging situation into a manageable one, and his grades improved as a result.

What strategies can help students use to adapt to challenging living conditions?

How can students maintain a balanced daily routine?

ACADEMIC SUCCESS STRATEGIES

Transitioning from advanced level to university involves adapting to a more independent learning environment and self-managing increased academic demands. Success strategies include:

- **Develop excellent study habits:** Establish and stick to a strict study schedule and set clear and time-specific academic goals.
- **Use university resources:** Take advantage of any and all university resources, such as libraries where books and internet are freely available, to facilitate effective and efficient learning.
- **Active participation:** Successful students participate in lectures, join study groups, and seek feedback from professors.
- **Complete all assignments on time:** Every task and assignment should be completed carefully and fully before the given deadline.

SCENARIO

Samirah was an outstanding student in her advanced level studies, always at the top of her class. However, when Samirah entered university, she found the academic environment to be more challenging. The lectures were larger than expected, the coursework more demanding, and the independent learning demands far more intense. During her first semester Samirah struggled to keep up with her assignments and tests, and she felt overwhelmed by the work load. Determined to succeed, Samirah changed her approach. She created a detailed study schedule, dedicating specific hours each day to each course respectively. Samirah also made conscious decision to attend all lectures and ask questions whenever she didn't understand something. She also committed to engaging into group discussions with other students. Additionally, Samirah began visiting library regularly to take advantage of all the library resources. Through these strategies, Samirah improved her academic performance and adapted to the intense demands of university life.

What changes did Samirah make to cope with the university workload?

How did Samirah use university resources?

Why did Samirah decide to join group discussion and participate in all of her classes?

EXTRA-CURRICULAR ACTIVITIES

Extra-curricular activities can provide exceptional opportunities for social interaction and personal growth as well as the development of skills. Joining clubs, sports teams, and other groups can provide extremely valuable experiences beyond the classroom. In university, join various campaigns, clubs, and outreach programs to increase your learning and exposure. Things to consider:

- **Skills development:** Choose activities that will help you develop the skills you need to succeed later in your career.
- **Social networking:** Extracurricular groups and activities will expose you to many new people who can help you grow your network as well as find new friendships.
- **Personal growth:** Trying new things can be scary. Engaging in new activities can help overcome fears and develop and showcase talents.

SCENARIO

Amani was a new university student who felt overwhelmed by the academic pressures and the vastness of the campus. Though she was an excellent student in high school, she found it hard to connect with her peers in the new environment. One day while walking past the student union, she noticed a poster for the university drama club auditions. Amani always loved acting, so she decided to give it a try. Amani was nervous on the day of her audition, but she was greeted warmly by the club members. As rehearsals got underway, Amani found herself making new friends and feeling more comfortable on campus. Through the drama club Amani found her hidden talent of scriptwriting. Encouraged by her fellow club members, she wrote a short play that was later performed at the university cultural festival. This experience made Amani more confident and she gained more opportunities. While balancing the demands of her academic work and the drama club was challenging, Amani created a detailed schedule that helped her succeed. Furthermore, through the drama club, Amani developed the important skills of teamwork, time management, and public speaking.

What new skills did Amani develop by participating in the drama club?

How did Amani balance her many responsibilities?

How did joining the drama club help Amani adjust to university life?

BUDGETING & BALANCING

Balancing life involves managing finances effectively, distinguishing between needs and wants, and ensuring that all essential needs are met while also saving for future emergencies. Needs are things that are essential and necessary; wants are things for leisure and there is no real negative impact from not having them.

- Know how to differentiate between needs and wants.
- Make sure that you have funds to ensure your basic needs are met, even if you will miss the money.
- Know the amount of your income and live withing that amount. You should not consume more than your income.
- Save for emergencies. If you have extra funds available after your need funds and emergency savings, then you can use that extra money only can be used for wants/leisure.

SCENARIO

Nyahuba was a third-year university student known for his disciplined approach to life. He had a part-time job at the campus library, which provided an income. His parents always emphasized the importance of financial discipline, and he took their advice seriously. Every month, Nyahuba set his budget. He listed his essential needs, such as tuition fees, rent, food, and transportation. These were the most important expenses which he had to cover to continue his studies and maintain his well-being. Nyahuba also set aside a portion of his income for savings, understanding the importance of having money for emergencies. Nyahuba loved going out and buying new electronic devices like phones and computers, but he knew these were wants, not needs. He only used any extra money for such items, money that was available only after he covered his essential needs and emergency savings. One month, Nyahuba faced an unexpected expense when his laptop broke down. He had to use his emergency savings to fix the laptop. Since Nyahuba had been actively saving for quite some time, he was able to afford the unexpected repair without impacting his essential needs and without having to borrow money.

How did Nyahuba differentiate between his needs and wants?

What enabled Nyahuba to handle the unexpected expense of his laptop repair?

Why is it important to save? Do you save? If not, why and how can you start to save funds?

HEALTH AND WELLNESS

Health and wellness are crucial for maintaining a balanced and productive life, especially during the demanding university years. This encompasses physical health, mental well-being, and emotional stability. If you are not careful with your health and fall ill, you will not be able to attend all classes and you will miss assignments and quizzes. Things to consider:

- **Exercise regularly:** Daily physical activities helps maintain fitness and reduce stress.
- **Eat a balanced diet:** Eating a well-rounded diet more effectively fuels the body and mind. Eat protein and vitamin- rich foods and avoid processed foods and too much sugar.
- **Get adequate sleep:** Ensuring sufficient rest is essential to support overall health and cognitive function.
- **Engage in active stress management:** Utilize such techniques as mindfulness and relaxation exercises. And do not be shy. Seek support when needed.

SCENARIO

Enzi was a first-year university student with a difficult academic schedule and a part-time job. As the semester progressed, Enzi noticed he was constantly fatigued, his grades were slipping, and he was frequently falling ill. Realizing that his current lifestyle was unsustainable, Enzi decided to make some changes. He started by prioritizing his physical health. Enzi began waking up early for a morning jog, which helped him feel more energized and focused throughout the day. He also made a commitment to eating healthier by preparing balanced meals including those with fruits and vegetables. These changes not only improved Enzi's energy levels but also his concentration during lectures and study sessions. Enzi also made sure to get at least six hours sleep every night. He created a bedtime routine that involved disconnecting from electronic devices an hour before bed and reading a book instead. This practice helped him fall asleep more easily and wake up feeling refreshed. Through these practices Enzi's health and academic performance improved, and he felt more capable of handling both his studies and his part time job.

What changes did Enzi make to improve his physical health?

Why is maintaining a regular sleep schedule important?

What are other ways to improve personal health?

PRAYER

While every university student has his or her own beliefs and is free to worship as he/she chooses (or not), prayer can be a powerful tool in developing a sense of peace, purpose, and connection. Regular prayer may also help manage stress, provide comfort during challenging times, and enhance overall well-being. Benefits of prayer may include:

Stress Relief: Prayer can offer a sense of calm and reduce anxiety.

Emotional Support: Prayer can provide comfort and a sense of hope during difficult times.

Spiritual Connection: Prayer can help one develop a deeper inner experience and connection with one's own belief systems and values.

SCENARIO

Safiya was in her final year of university and faced immense pressure with her studies as well as with personal issues back home. Despite her best efforts to manage her time and workload, she found herself overwhelmed and anxious. Remembering her upbringing and the peace she used to find in prayer, Safiya decided to go to church. Every morning and evening, Safiya dedicated a few minutes for prayer. These moments of stillness and reflection helped her start and end each day with a clear mind. Through prayer, she found peace and strength, which allowed her to tackle her daily challenges with a more positive and focused mindset. Safiya also joined a campus prayer group where she met other students who shared similar experiences. This community provided her with emotional support and encouragement. Sharing her burdens and listening to others' stories strengthened her sense of belonging and reduced her feelings of isolation. As she continued her prayer routine, Safiya noticed a significant improvement in her emotional well-being. Her anxiety levels decreased, and she felt more resilient.

How did prayer help Safiya manage her stress and anxiety?

What benefits did Safiya gain from joining the campus prayer group?

Based on your own beliefs, do you feel that there is an importance to prayer?

WHAT DO YOU WISH YOU KNEW BEFORE JOINING UNIVERSITY THAT NO ONE TOLD YOU?

No one will teach you how to live, what to do, and what not to do. It's all up to you. Effectively juggling academics, social life, personal well-being, and a even perhaps a part-time job required excellent time management skills.

Creating a support system of friends, mentors, and advisers helps overcome obstacles and creates a far better university life experience.

University is a great time for personal and academic growth. Embrace every challenge and opportunity it offers. University is the place where you can become the best or worst version of yourself.

Early career guidance -- including general course awareness, internships and career counseling services -- is crucial to help ensure post-graduate career success.

CONCLUSION

Generally, in university students are encouraged to:

- Engage critically with their subjects.
- Explore diverse perspectives.
- Develop deeper understanding of their chosen field.
- Meet people from different backgrounds and cultures.

The learning environment in university:

- Is more flexible allowing an individual to pursue their individual interests outside the classroom.
- Offers opportunities for personal development.
- Fosters independence, resilience and the ability to think independently.

University life may be challenging but with right mindset, support, and determination students can navigate this transition successfully.
